

Non-Road Electric Vehicles

Are you ready to make the switch to electric? We can help you find the right energy solutions for your business or industry.

There are plenty of reasons to switch from fuel-powered to electric vehicles. They're cheaper to own and operate, and they require less service repair and maintenance. And with no carbon emissions, they make for healthier, safer, cleaner and quieter work environments. They don't require on-site fuel storage either—so your workplace is safer when you go electric.

Incentive guidelines

- Standard incentives are open to all commercial and industrial participants (subject to eligibility requirements and funding availability).
- Pre-approval is required.
- Equipment must be new, with the exception of forklifts, which can be new or refurbished with a new battery.
- Equipment must be operated within the Tennessee Valley service territory.
- If the equipment you wish to purchase or lease is not listed in this table, your project may qualify for a custom incentive.
- Contact the operations center at 866-233-0450 for more information.
